Abstract
During my two-year teaching experience in a university setting one of the biggest problems I faced was to motivate my students at a private (mostly) technical university for the reading classes. It is an undeniable fact that reading classes require EFL learners to have enough skill, confidence, and motivation. However, this requirement is hard to be fulfilled especially for many EFL technical students because their exposure to English is very limited and they have difficulty in meeting some necessary requirements of reading such as critical thinking and use of some strategies and techniques. Consequently, the action research was conducted to involve my technical preparatory students in EFL reading classes. Through this study, I also aimed to develop a deeper and better understanding of my teaching and grow professionally. The question guiding this study was: What happens to my students’ attitudes towards reading classes when I integrate visuals, hands-on activities, and competitions into my lessons? After planning the procedures, the action research process involved a pre-test, 4-week intervention, and a post-test to measure the improvement. The statistical data did not show any significant difference in their achievement, but qualitative data taken from observation, field notes, and interviews revealed that integration of visuals and interactive activities into reading classes motivated the students and engaged them more in the classes.

Keywords: Action research; reading; EFL; motivation

1. Introduction

Today, reading is one of the most problematic areas in education (Dreyer & Nel, 2003). A significant number of students try very hard to deal with complex reading texts, but as Levine, Ferenz, and Reves (2000) express, “the ability to read academic texts is considered one of the most important skills that university students of English as a Second Language (ESL) and English as a Foreign Language (EFL) need to acquire” (p. 1). Reading comprehension is the “essence of reading” (Durkin, 1993);
therefore, acquiring reading comprehension skills is a must not only in academic learning but also in professional life and in lifelong learning (as cited in Levine et al., 2000). Even though reading is a very complex process, the importance of reading comprehension cannot be undervalued. Also, Gambrell, Block, and Pressley (2002) state that “the most important thing about reading is comprehension” (p. 3). Comprehension is beyond the literal meaning of a text and involves a complicated set of other skills and many processes such as using many strategies, cognitive and metacognitive skills. However, many students enter universities unprepared for the demands required by the process of reading. It can be said that reading classes pose problems especially in technical universities’ preparatory classes because of students’ low self-esteem and engagement in English learning, which has been a typical problem in technical universities for a very long period of time (Shen & Huang, 2007). Motivating the students in technical universities to engage in the learning process and getting them to participate in reading classes are among the biggest challenges that teachers have to face. One major reason is that these students take fewer hours in learning English, and that these courses are mostly replaced by other courses taught to be more useful. These high school students almost forget English until they become freshmen at universities, which is a frustrating factor because the first year of university require them to study in one-year English preparatory program. They are mostly demotivated and frustrated when attending English courses in preparatory programs since their knowledge of English is very limited. In an attempt to solve this problem, the teacher researcher decided to conduct an action research in her class to get her students to engage in the reading classes actively.

1.1. Statement of the problem (Initial Reflection)

1.1.1. Selecting an issue

Many EFL learners do not have the skill, confidence, and motivation to be involved in reading classes because their exposure to English is quite limited and reading requires critical thinking and use of some strategies and techniques. As Cheng (2010) suggested for Taiwanese freshmen university students, my students’ knowledge of English texts is unsatisfactory and their efficacy in reading is problematic as well. I observed that they are not able to handle the large amount of text, and that they diligently depend on word-by-word reading. Instead of inferring the meaning of the words from context, they rely on their friends or me as their teacher but mostly on bilingual dictionaries or translators, which make them move away from the essence of reading. Soon, they start to moan and groan about the difficulty and dullness of the text or some of them doze off at their desks and some use their mobile phones to check their social media accounts. These kinds of attitudes make both teaching and learning more difficult. The problem mentioned above cause to an urgent concern —how to help struggling EFL technical students read the texts in their course books willingly.

1.1.2. Collecting information about the issue
After selecting an issue to examine in more detail, I started to self-observe my own reading classes and talked to my colleagues about the issue. Most of them had the same problem. Over time I realized that I was not offering any variety in my reading classes. Most of the time, because of time and classroom management issues, I was avoiding competitions or games. Generally, I followed a routinized program. After asking students to close their books and take a piece of paper, I got them to take notes of important points they caught while listening to the text. Then, we discussed their notes, analyzed the text in detail, and answered the comprehension questions, which was a very boring process for my students and also for me. Their moans and groans demotivated me as well and I was afraid of coming up with some creative ideas in case they may not show any interest. Luckily, I came to my senses and asked my students the reason why they are demotivated and do not pay any attention to the reading texts. The reading texts were boring and long with lots of unknown vocabulary, they answered with one voice. Thus, I decided to review the related literature about motivation and reading comprehension. My starting point was how to motivate my students for reading, and I decided to integrate some visuals, hands-on learning activities, and competitions into my lessons.

1.2. Purpose of the Study and Action Research Question

Some of the purposes of this study are to investigate my own practice as a teacher-researcher, bring about some changes in my classroom teaching and learning, to develop a deeper and better understanding of my teaching process, to grow and learn professionally by making use of my own experiences, and to gain a better control over my own teaching practice (Farrel, 2007). My primary purpose, on the other hand, is to help my struggling students read the texts in their course books willingly, which led me to ask the following question to guide this project: What happens to my students’ attitudes towards reading classes when I integrate visuals, hands-on activities, and competitions into my lessons?

1.3. Significance of the Study

This study is an action research explained by Burns as a study which “involves teachers taking ‘action’, often in the form of an intervention to systematically investigate, through ‘research’, a classroom issue they feel is worth exploring in order to better understand or enhance an aspect of teaching or learning” (as cited in Edwards & Burns, 2016). Developing a ‘reflective mindset’ (Goodnough, 2011; Seider & Lemma, 2004) and also better and deeper knowledge and personal theories about and out of their own teaching process, increasing awareness and empowerment (Atay, 2008; Wyatt, 2011) are among the benefits of action research to the teacher researcher. Furthermore, Edwards and Burns (2016) remarked that classroom practitioners become more self-confident, reflective, empowered, and flexible in their way of teaching thanks to action research they conducted. The benefits listed above show the significance of the action research per se.
1.4. Literature Review

Reading is one of the most crucial skills for students to acquire in their daily life to keep being updated about the latest issues and in their academic life because many universities require students to study in English preparatory programs for a year. Reading is highly important especially for preparatory students at University of Turkish Aeronautical Association (UTAA) because they are going to continue their departments in English and reading their subject matters in English will be unavoidable. However, I noticed that technical preparatory students in my class faced a lot of problems while reading in English because of their low motivation and engagement. When asked, they claimed that this was mainly because of the dullness of long reading texts with full of unknown vocabulary.

Being an interactive process, reading is defined by Alderson (2000) as a “process of interaction between a reader and the text” (p. 3). Nuttall (1996) believes that reading is not looking at sentences and words and checking for the meanings one-by-one, but going beyond them and understanding them intellectually. Jiménez’s definition (2000) for reading as “the learners’ ability to interpret or work out the meaning of a written text and react towards it as a result” (as cited in Castillo & Bonillo, 2014, p. 70), on the other hand, leads us to the fact that reading comprehension is necessary in this process. Reading comprehension is a very complex process, though. Since it has been found that teaching reading strategies results in better reading comprehension, many studies have been conducted to see the effect of teaching reading strategies on reading comprehension skills (Blickenstaff, Hallquist, & Kopel, 2013; Cadena, 2006; Chou, Wang, & Ching, 2012; Küçükoğlu, 2013; Song, 1998).

This complex nature of reading comprehension process may demotivate students easily. Therefore, it is important to motivate the students and to keep them eager and enthusiastic for reading. Motivation is one of the most effective things to shoulder the reading process (Grabe & Stoller, 2002; Castillo & Bonilla, 2014) especially for my students who are particularly demotivated to read and engage in the reading classes. Many studies revealed the great impact of motivation on reading comprehension (Cox & Guthrie, 2001; Guthrie, Wigfield, Metsala, & Cox, 1999; İçmez, 2009; Knoll, 2000; Morgan & Fuchs, 2007).

Researchers have claimed that highly motivated students can overcome reading challenges easily. Guthrie et al. (1999) argued some instructional practices that might be helpful in boosting reading motivation and comprehension: promoting social interactions related to reading, enhancing a friendly and non-threatening teacher-student(s) relationship, and using hands-on activities are among these practices. Use of visuals, hands-on activities, and competitions in reading classes may increase the students’ motivation.

As Bowen (1982) and Bellver (1989) suggested, teachers can create a strong connection between student and the reading text by using visual aids and encourage them to read the texts enthusiastically, which helped them to get the abstract ideas
easily (as cited in Yunus, Salehi, & John, 2013). The visuals, just like metal frames of a building (Carney & Levin, 2002) and as a bridge between the native language and English, support the students during the reading process and help them understand the texts without needing any translations or excessive and long explanations (Brinton, 2001). Likewise, competitions can be used to engage students. As Gordon and Gillespie (2006) suggested, making students into enthusiastic, flexible, adaptable, and collaborative individuals are among some positive results that can be attained thanks to a competitive environment.

2. Method

2.1. Planning

After selecting the issue I wanted to touch upon, I did some research on the related literature and decided to integrate three practices into my lessons: use of visuals, hands-on activities, and competitions. I hoped these practices to motivate my students to engage in the reading classes.

After observing what was going on in my classes and getting the opinions of my students, I planned my action and decided on the intervention procedures. The action will take place in the treatment process. Students will get a pre-test on reading just before the treatment process and a post-test just after the treatment to measure the improvement and to see if there is a positive change in their achievement. The treatment process will be 4 weeks. The teacher will make a lesson plan for each week appropriate for the aim of the research. These plans will be designed for the reading lessons in the course book ‘Top Notch 2 and 3, 3rd edition.’ in which each unit consists of preview and review sections and four lessons, and Lesson 3 or Lesson 4 is for reading texts. After the treatment process, the students will be given a post-test and at least 5 students will be interviewed on a volunteer basis. After each week’s intervention lesson, the teacher-researcher will take notes of what she observed.

2.1.1. Setting and Participants

I was an instructor in Foreign Languages Department at UTAA, and I, as a teacher-researcher, conducted the action research in my own class which included 21 students. Most of the students were technical students, which means they are going to study in either engineering or flight training departments. My claim is that being technical students might be the primary reason of low motivation and engagement in reading classes.

2.1.2. Instruments

As for data collection tools, pre and post-tests, observation, field notes, and interview will serve as the tools for gathering data. The statistical analyses of the pre-test and post-test data will be conducted by using the Statistical Package for Social Sciences (SPSS) version 21.
2.2. Action (Data Collection Procedures)

In the beginning of my research I gave my students a pre-test based on the reading text in Unit 9 Lesson 4 in the course book Top Notch 2 to measure their performance before implementing the intervention. This test consisted of the reading text (Top Notch 2, U9 L4) with three parts. The first part is a matching the word with the appropriate definition activity with 7 options. The second part consists of 9 true-false questions. Lastly, the third part includes three multiple choice questions. Students were not informed about the quiz. Later on I used these results to record the change.

In the following four weeks I practiced the activities for the reading text of each week I had planned beforehand. I especially tried to integrate some visuals such as pictures, photos, or videos into my each lesson to get my students’ attention. The program of intervention was just like this:

Table 1. Implementation of the intervention

<table>
<thead>
<tr>
<th>Week</th>
<th>Reading Text/ Unit</th>
<th>Activity</th>
<th>Pre-reading Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st Week</td>
<td>Top Notch 2/ Unit 10 – Ethics and Values</td>
<td>Lesson 4 – Discuss acts of kindness and honesty</td>
<td>Before reading the text (see Appendix A), discuss the title of the lesson 4. Show the power point presentation that includes some photos showing some acts of kindness and honesty and get the students to guess the context and to talk about their feelings and opinions. Watch the related videos and talk about the students’ feelings and opinions: <a href="https://www.youtube.com/watch?v=PT-HBi2TVtI">https://www.youtube.com/watch?v=PT-HBi2TVtI</a> <a href="https://www.youtube.com/watch?v=oeph_eX_pVw">https://www.youtube.com/watch?v=oeph_eX_pVw</a> <a href="https://www.youtube.com/watch?v=KMYrI_Mt8A">https://www.youtube.com/watch?v=KMYrI_Mt8A</a> Students read the text individually and silently in the given time. The teacher shows a PPT for unknown vocabulary Competition Time! – The class is divided into two groups. On the walls at the back of the class the printed versions of the reading texts are hung. For each question one student from each group comes to the teacher desk on which a bell is placed. The students see the question from the PPT, and the student who has rung the bell first has a chance to answer the question. If s/he answers correctly, the group gets one point. If not, the other student will have a chance to answer the question. The group which collects more points will be the winner. (for the questions: see Appendix B) The teacher puts emphasis on the parts the students have difficulty in, and finally the class answers the questions in the book.</td>
</tr>
<tr>
<td>2nd Week</td>
<td>Top Notch 3/ Unit 1 – Make Small Talk</td>
<td>Lesson 4 – Discuss how culture changes over time</td>
<td>Before reading the text (see Appendix C), discuss the title and get students to give some examples from their lives. For the warm-up part, go to the website with the title ‘Remembering being a child in 90s with 200 photos’. The photos on the website are good examples of cultural changes over time. Students express their feelings and opinions about the photos. <a href="http://onedio.com/haber/200-fotografla-90-lar-cocuklarini-gecmis-goturecek-dev-galeri-344605">http://onedio.com/haber/200-fotografla-90-lar-cocuklarini-gecmis-goturecek-dev-galeri-344605</a> Students read the text individually and silently in the given time. Competition Time! – The class is divided into four groups. Each group gets a piece of paper and a pen. They close their books and put them aside. The teacher reads the questions which are True-False or short answer, and the groups write their answers on their papers in 15 seconds and raise them up. Each correct answer is 1 point. The group which collects more points will be the winner. (for the questions: see Appendix D)</td>
</tr>
</tbody>
</table>
After implementing intervention, I gave my students a post-test based on the reading text in unit 5 Lesson 3 in the course book Top Notch 3 to measure the change. This test included the reading text (TN3, U5, L3) with three parts. The first part is a matching the word with the appropriate definition activity with 7 options. The second part consists of 7 true-false questions. Lastly, the third part includes 5 multiple choice questions. Students were not informed about the quiz. Later on I used these results to record the change. The level and the type of the test were the same to get more reliable results.

3. Findings and Discussion

3.1. Quantitative Data
After the intervention these were my results. For analyzing the gathered data, Paired T-test from SPPS was used. Pallant (2010) suggests that this technique is suitable for pre-test/post-test experimental designs.

Table 2. Paired T-test results of pre and post tests

<table>
<thead>
<tr>
<th></th>
<th>Mean</th>
<th>N</th>
<th>Std. Deviation</th>
<th>Std. Error Mean</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pair 1</td>
<td>PreTest</td>
<td>12.0952</td>
<td>21</td>
<td>3.93579</td>
</tr>
<tr>
<td>PostTest</td>
<td>13.6190</td>
<td>21</td>
<td>4.52190</td>
<td>.98676</td>
</tr>
</tbody>
</table>

Table 3. Paired samples test results

<table>
<thead>
<tr>
<th>Paired Differences</th>
<th>Mean</th>
<th>Std. Deviation</th>
<th>Std.Error Mean</th>
<th>t</th>
<th>df</th>
<th>Sig (2-tailed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pair 1 PreTest - PostTest</td>
<td>-1.52381</td>
<td>3.78971</td>
<td>.82698</td>
<td>-1.843</td>
<td>20</td>
<td>.080</td>
</tr>
</tbody>
</table>

To be able to interpret the date correctly, we need to look in the final column ‘Sig. (2-tailed)’ in the table labeled ‘Paired Samples Test’. If the value in this section is less than .05, we can conclude that there is a significant difference between pre-test and post-test. However, my value ‘.080’ is bigger than .05, which shows that there is no significant difference between two scores. This might be resulting from the difference in the number of questions or from the time limitations. I might have gotten different results if the intervention process had been longer and I had taught reading strategies for comprehension.

3.2. Qualitative Data

3.2.1. Observation

Even though numerical data says the opposite, my observation is completely different. After each lesson, I wrote down my observation which shows that I reached my aim. Integration of visuals, hands-on activity, and competitions changed the atmosphere of the class and the attitudes of my students. Starting each reading lesson with visuals and interesting videos attracted their attention, and they were more motivated in the rest of the lesson and had something to say about the topic. The interactive activities kept their eagerness alive. Their urge to win the competition made them read the text. After each lesson, they left the class with a big smile on their face, which is quite motivating for me. I remember the times when all the students left the class with moans and groans. The most interesting thing I observed happened during the fourth week of intervention when we did a hands-on activity. When I explained the activity and gave the instructions, most of the students complained about it since they were not kindergarten students. However, they were so absorbed in the activity that they even forgot the break time. They put their works
on the wall carefully and presented them successfully to the class. They actually enjoyed it.

3.2.2. Interviews

In order to reach more rich data and provide more answers in depth, I wanted to support my study with a qualitative method. Therefore, I interviewed nine of students. The interviews helped me “to gain insight into things such as people's opinions, feelings, emotions and experiences” (Dörnyei, 2007, 173). During the interview, I asked my students to compare the reading activities we did before and the ones we did during the four weeks. Some of my questions: Which technique was effective for you: reading the text silently and answering the questions one-by-one or reading within a group and doing interactive activities? How did you feel during the interactive activities? Were they useful? Do you prefer silent reading by yourselves or group work?

During the interview, my students complained about the dullness of the reading texts again. One of the female students suggested that they can try to read some texts about their departments because they study at a technical university. Most of the students found the interactive activities and visuals enjoyable and useful stating as following:

Student 1:

"Interactive activities are better for us. They help us remember the things easily. With my partner we really tried to understand the text. We found the main idea. I really liked the poster presentation activity, maybe because I like doing handwork. It really helped me to understand better. Both watching videos and reading the text were very effective for me, especially the videos we watched about the festivals in the last week. I do not like reading by myself in the class because our paces are different, and some people finish reading quickly and start talking, so I cannot focus. The video about festivals helped me a lot. While reading the text, I took a note of important points. When I see them on the video, they stuck in my mind".

Student 4

"I do not find reading individually effective because we get distracted after a while. Some of my friends start to talk or I see lots of unknown words, which make me not to understand the text. The most efficient one for me was poster-presentation because I could ask my friend the words I do not know. Competitions are very useful especially in the last hours, but sometimes we lose lots of time. For example, I learned the word 'moral dilemma' from the video that we watched. It helped me a lot. In fact, I did not read alone, but I had to read the texts within a group”.

Student 5

"I really like competitions especially when I do not have energy because competitions help me to come to my senses. I do not like preparing posters because these kinds of
activities are at a level of kindergarten. On the other hand, they helped me to discover
my ability at these handcrafts things. I did not know I was good at them before”.

Student 6

“I prefer reading in groups because I can get help from my friends. I am not good at
reading alone. Interactive activities and visuals help me remember better. When I read
all by myself, I do not remember anything because my basic knowledge of English is
not very sufficient and I cannot focus easily because of not being able to understand
most of the things in a text. Normally I cannot tell anything about Bolivar in English,
but thanks to video I have some things to say”.

Student 7

“I definitely prefer interactive activities because my English is bad. These kinds of
activities are more useful and enjoyable for me because I can get help from my friends.
While studying alone, I tend to sleep or use my mobile phone”.

Student 9

“My basic knowledge of English is not good, so when I encounter many unknown
words, I easily get distracted. The competitions and activities help me spread positive
energy. I get motivated. The videos and visual helped me learn many words and
remember the context easily. I can get help from my friends during the interactive
activities”.

One of the male students remarked his opinion with these words:

Student 2

“As a class, we are not ready for the group work. Some problems arise when the
group is formed with a lot of people. For example, some people do not take over the
responsibility. When we are groups of two or three, I enjoy more. That’s why, I enjoyed
the poster presentation more. Interactive activities are more useful for us. When
studying individually, we can get distracted very easily, but group work helps us take
over the responsibility to have a clear conscience and participate in the lesson”.

Two of the male students enjoy the competitions in terms of fun, but they prefer to
study individually. This point of view is illustrated by following words:

Student 3

“I like reading alone. When there is a competition, the feeling of winning dominates
the atmosphere of the classroom, so we do not focus on the text. Likewise, when we are
doing a hands-on activity, we focus mostly on the drawing, cutting the papers, which
drifts us away from the subject. Competitions help us to have fun during the lesson”.

Student 8

“I really enjoy competitions, but studying individually is more useful for me. I do not
find true false activities very useful, but giving short answers were quite useful. I
learned many things”.

With the help of interviews, I was able to see that my observation corresponds to students’ points of view. Most of them enjoyed the interactive activities and found visuals and videos very useful especially in remembering the unknown vocabulary. They expressed that they participated more compared to studying individually because they easily get distracted while studying alone. They tend to use their mobile phones or sleep. However, with a group, they take over their responsibility and act accordingly. They help each other as well. At the same time, they have fun. Even students who like self-study stated that they had fun during the activities.

4. Conclusion and Reflection

The present study explored if the integration of visuals, hands-on activities, and competitions into EFL reading classes changed the attitudes of technical university students. Even though statistical data says the opposite, my qualitative data shows that I achieved my goal. I was pleased to see the improvement and to see that I managed to involve my technical students in reading classes. Looking at the post-test results, half of the students progressed, but the difference is not significant. I believe this study could have yielded better results if I had more time for the intervention process since I could integrate a range of interactive activities and teach my students reading strategies.

In conclusion, visuals and interactive activities such as hands-on group works and competitions help me involve the low motivated technical students in the reading classes. Visuals attracted their attention in the first place, and then they came to their senses with the help of positive effect of group work. These activities prevented most of the students from using their mobile phones and sleeping. Instead, they took over the responsibility and made sufficient efforts to engage in the text. They asked their peers’ help as well.

Pachtman and Wilson (2006) expressed that giving our students a chance to select what to read is a great motivator to read the material. However, what are we supposed to do if we do not have an opportunity to be selective about the reading materials? This study helped me realize that we can offer our students a range of activities even if we cannot provide them with a choice of texts. We, as teachers, need to discover the alternative ways of involving these students in the classes. We expect our students to be intrinsically motivated, but in reality it is mostly our responsibility to motivate and lead them because most of them are demotivated and avoid reading.

I will continue to utilize this strategy in my future classes in order to improve my students’ study skills and prepare them for college and the working world.

Surely this study has some limitations. The present study was conducted with only one class, which might make generalization of the results difficult. In fact, this results from the nature of action research which is “empowering teachers to monitor their own practices in a more autonomous manner with a vision of challenging improving their own techniques of teaching through their own participatory research” as Kayaoglu (2015, p. 140) reported. Still, similar studies in different and larger EFL
reading classes might be carried out to investigate if the practices mentioned in this study work for other students, too. Other practices thought to be useful might be tried to motivate students to read their assigned texts and the results can be shared.

As Biesta and Burbules (2003) argue, educational problems are unique, and we can only manage to reach at unique responses by examining our own educational practice rather than top-down enforcements. It is highly suggested that teachers in action will bring some action to their own classes by conducting their own studies.

Acknowledgements

The completion of this study could not have been possible without the expertise of Prof. Dr. Arif Sarıçoğan. A debt of gratitude is owed to him for his guidance. I would also like to express my gratitude to the University of Turkish Aeronautical Association for letting me conduct this study and thank my well-beloved colleagues and dear teachers for their invaluable comments on this study.

**Appendix C. TN3 U1 L4**

**Global Culture**

Hartley: Oh, definitely, and maybe more so for me than for others because Jackson is in the South, which was pretty socially conservative when I was a young girl.

GC: Please tell us about some of the changes you have personally experienced.

Hartley: My heavens! Well, the new South is so different from the old South in a lot of good ways, as everyone knows. But since you ask me personally, it would probably be dating customs, the way young people talk to their elders, table manners...

GC: OK. How have those things changed?

Hartley: Well, for example, when I was growing up, the family dinner hour was the one time in the day when the family sat down together, and it was a special time. Today, that's changed. In many families, there is no dinner hour. Kids eat snacks or fast food all day, moms are out in the workforce and don't have time to make a proper meal, and there are so many activities that it seems like no one has time. In my day, children were more respectful and quiet at the table—we spoke when we were spoken to, we didn't put our elbows on the table, and we dressed nicely. No one came to the dinner table in shorts or jeans the way they do today.

GC: That is different, isn't it? You mentioned dating. How has that changed?

Hartley: Well, today, I see boys and girls on dates at the mall. They can't be more than twelve or thirteen years old! I wasn't allowed to go out on a proper date until I was sixteen. And when I finally was allowed to date, my parents didn't let me go out with a boy they hadn't already met. Oh, and I had a definite curfew. I had to be home by 11:00. If I came in late, I was grounded—for at least a month. It was a little different for my brother, though. I guess there was a bit of a double standard. He could go out on dates when he was sixteen, but his curfew wasn't as strict as mine. He was allowed to stay out until midnight.

GC: And you mentioned the way young people addressed their elders. How has that changed?

Hartley: Well, today you hear teens, even children, calling adults by their first names. We had to address adults as "Sir" or "Ma'am." And we always used Mr. and Mrs. I suppose that sounds a little old-fashioned today, doesn't it?

GC: Maybe so! Thanks so much, Ms. Hartley, for an interesting interview.

**Appendix D. Competition**

1. Ms. Hartley is in her forties.

2. When Ms. Hartley was growing up, children were less polite.

3. When Ms. Hartley was growing up, the main meal was dinner.

4. Both Ms. Hartley and her brother were allowed to date at the age of sixteen.

5. Ms. Hartley didn’t use sir or madam with adults; she used Mr. and Mrs.

6. Ms. Hartley’s upbringing was liberal.

7. The family enforced table manners and etiquette for interacting with adults.
8. Ms. Hartley’s parents believed in disciplining their children if they broke rules.
9. Ms. Hartley didn’t date as a teenager.
